### INGLÊS
fluent

## PROFESSIONAL EXPERIENCE

### FRONT-END DEVELOPER
PREDIFY
Jun/2022 - Current

- Junior Front-end Developer, I contributed significantly to the migration of the Angular project to Vue.js. Additionally, I focused on design responsiveness and created new interfaces integrated with APIs, improving the user experience..
- My work included implementing agile practices and using Azure DevOps to establish a continuous integration/continuous delivery (CI/CD) flow.
- Daily code reviews to maintain software quality and maintain best practices within the team.
- Due to my performance, I was promoted to Middle developer and took on the responsibility of mentoring a new Junior Developer on our team

## PROJECTS

### Portfolio
portifolio-vf.netlify.app/
Main project, using as much HTML, CSS as possible and native JavaScript. It has my experiences, work and A little bit of my history with development.

### RocketQ
github.com/VitorFerronato/RocketQ
Rocket.Q is an interaction application through questions, making it possible to create a room for anonymous internet users to ask questions and the creator of the room, in possession of a password, manage these questions and mark them as read.

### Make your burguer
github.com/VitorFerronato/make-your-burger
Make your burger is a component-based application, we have the frontend where the customer fills out the hamburger form, this request goes to the database and returns to the dashboard through an API with all requests.
The orders dashboard also has a kind of CRUD, where we can delete and change orders.

### Todo list
github.com/VitorFerronato/ToDoList
The project is a task app, where you can register new tasks, edit and delete them. Uses the browser's own localStorage.
